

MILITZER & MÜNCH PROJECTS: WE BUILD BRIDGES

PROJECT LOGISTICS

At Miltzer & Münch, one of our core business segments is project logistics. With any investment project, our industrial solutions are the answer to all logistics requirements. In the supply chain, we take on the function of control and integration and thus increase the efficiency of your supply chain. We guarantee smooth logistic processes, minimizing both costs and time:

- We develop global supply chain strategies
- We select the optimal import procedure
- We develop standardized, comprehensive documentation and reporting systems
- We guarantee smooth customs clearance
- We set up professional supplier management
- We minimize the operational costs of the supply chain

TRANSPORT LOGISTICS

We design complex, worldwide supply chains, optimizing all means of transport available:

- Road and rail transports (containerized and non-

containerized) to the CIS countries, the CEE countries and the Middle East

- Combined ocean / inland water freight
- Special transports: heavy lift / out-of-gauge transports
- Storage and warehousing

IT STRUCTURE

Effective logistics management depends on state-of-the-art IT structures. During the planning and transport phases, we use special project design and project realization software, while at the same time working with our own, specifically developed software during the transport and installation stages.

During the transport phase, our reliable tracking and tracing system lets you check the exact location and expected time of arrival of your goods.

Once the industrial plant has been put into operation, we use our warehouse management system for warehousing and distribution processes.

Connecting worlds.

M&M[®]
MILITZER & MÜNCH

VALUE ADDED SERVICES

Our professional logistics management for your big project offers far more than the mere transport:

- Industrial packaging
- Export documentation
- LOC handling until documents have been submitted to the bank
- Coordination of sub-suppliers' deliveries
- Monitoring of deliveries in terms of adherence to schedule
- Collation of shipments and most cost-effective loading in compliance with specified deadlines
- Translations
- Employee training

WAREHOUSE MANAGEMENT SYSTEM

Our warehouse management system optimally taps all warehousing resources and guarantees the end-to-end transparency of current projects:

- Interfaces to all commonly used ERP/PPS systems
- Segmentation of stock according to blocked stock / reserved stock / stock for unrestricted use
- Separation customs cleared – uncleared stock
- RFID technology or conventional bar code

- Monitoring of reorder level, proposals for replenishment automatically generated
- Systematic identification of stock as per charge, order and item code
- Program access and use of central servers available anytime, anyplace
- Inventory: permanent inventory, closing inventory, interface for the commercial management of inventory differences
- Comprehensive statistical functions

INSPECTION FREE ALONGSIDE SHIP (FAS)

We also support you with your container transports. Our FAS (Free Alongside Ship) inspection service comprises:

- Supply of containers
- Stowage, lashing, securing of containers
- Documentation of the discrepancy of data given in the shipping documents and de facto parameters
- Survey report
